

NorthGold

Web Platform

Member website, administrator panel, and the servers and services that keep both running. No mobile application.

ONE-TIME DEVELOPMENT	₹5,13,300 · website and administrator panel, incl. GST
SERVER & SERVICES	₹1,35,228 · first year, incl. GST
FIRST-YEAR TOTAL	₹6,48,528
PREPARED FOR	_____
PREPARED BY	_____
DATE	_____
VALID UNTIL	30 days from the date above

1 • Summary

A complete investment platform for the browser: a public website and member portal, a staff administration panel, and the infrastructure underneath both. Everything is reachable from any modern browser on a phone, tablet or desktop — the member screens are built mobile-first, so a phone is a first-class way to use the platform without an app being involved.

ONE-TIME DEVELOPMENT	₹4,35,000	Design, backend, member website, administrator panel, verification and support desk, testing and launch. Before GST.
FIRST-YEAR RUNNING COST	₹1,14,600	Servers, database, cache, storage, backups, monitoring, messaging. Before GST.

What the total is made of

PART	WHAT IT COVERS	AMOUNT
A • Web platform	Design system, backend and business logic, member website, administrator panel, identity verification, support desk, testing	₹4,35,000
One-time development, before GST		₹4,35,000
GST	At 18% on services	₹78,300
One-time development, payable		₹5,13,300
RECURRING	WHAT IT COVERS	FIRST YEAR
B • Infrastructure	Application server, database, cache, storage, backups, monitoring, domain	₹94,800
C • Services	WhatsApp, transactional email, SMS and OTP	₹19,800
Running cost, before GST		₹1,14,600
GST	At 18%	₹20,628
First-year running cost, payable		₹1,35,228

No mobile application is included

This quotation covers the web platform only. The two store fees that appeared in the earlier proposal — Google Play Console and the Apple Developer Program — are gone with it, and so is the app build itself. Should an app be wanted later, the backend quoted here already serves it: the applications would be new front-ends over the same API, not a second platform.

Maintenance is quoted separately and is optional

An annual support contract is set out in section 5. It is not included in either figure above, so the totals here are what it costs to build the platform and to keep it running — nothing more.

2 · Part A — Web platform

Everything a member and your staff use from a browser, and the system underneath that does the calculating.

ITEM	INCLUDED	AMOUNT
Design	Complete visual identity, colour and type system, light and dark themes, and every screen designed for desktop and mobile before a line is built.	₹45,000
Backend & business logic	Accounts and authentication, the investment plan engine, the monthly payout schedule, the wallet and its permanent transaction record, deposit and withdrawal approval, the five-level referral calculation, and the administrator interfaces behind every screen.	₹1,10,000
Member website	Public landing page with plan comparison and returns calculator, about and contact pages, sign-up and sign-in, member dashboard, wallet with invest and withdraw, investments, referral network with a visual tree, and profile.	₹85,000
Administrator panel	Deposit and withdrawal approval queues, platform-wide dashboard, plan and rate editor, referral level configuration, member directory with network view, payment channels, and settings.	₹50,000
Identity verification	Five documents collected as part of opening an account, a member page showing what each one is doing, and a review desk where staff approve or reject each document on its own with a reason the member sees.	₹45,000
Support desk	In-app chat between members and staff: a floating widget and a full page on the member side, and an inbox on the staff side that filters by member and by date. Reply, react, forward, star, edit, copy and delete on every message.	₹55,000
Member administration	Add or remove funds, set a balance to an exact figure, reset a password, block an account, and close one — each writing a permanent record the member can see on their own statement.	₹25,000
Testing & handover	Automated tests over the money calculations, cross-browser and mobile checking, deployment to your server, and a walkthrough with your team.	₹20,000
Part A subtotal		₹4,35,000

Why the backend is the largest single line

Most of what this platform does is arithmetic that has to be right every time and has to be able to explain itself afterwards. A monthly return is not one percentage — it is a rate that depends on how much was deposited *and* how long it has been held, fixed at the moment of purchase so that editing a plan never changes what an existing investor was promised. Referral commission walks five levels up the network on two separate events, and records the ones it deliberately skipped along with the reason. Every balance change writes one row carrying the resulting balance, so a statement can be reconciled without replaying history.

None of that is visible on a screen, and all of it is what makes the screens trustworthy.

3 · Parts B and C — Running the platform

These are ongoing costs, billed by the providers rather than by us. They are listed at current market rates so you can see the real cost of running the platform.

B · Servers and infrastructure

ITEM	SPECIFICATION	MONTHLY	YEARLY
Application server	4 vCPU, 8 GB RAM, 160 GB SSD, with room to grow. Runs the website and the panel.	₹2,700	₹32,400
Database	Managed PostgreSQL with automatic failover and a standby replica.	₹2,200	₹26,400
Cache & job queue	Redis. Runs the monthly payout schedule and live price updates.	₹750	₹9,000
File storage & delivery	Receipts, identity documents and images, served from a content network.	₹850	₹10,200
Backups	Daily database snapshots kept for 90 days, plus weekly off-site copies.	₹650	₹7,800
Monitoring & alerts	Uptime checks, error tracking and alerts to your team when something breaks — before a member reports it.	₹600	₹7,200
Domain & certificate	One .com domain with WHOIS privacy. Security certificate renewed automatically.	₹150	₹1,800
Part B subtotal, per year			₹94,800

C · Services

ITEM	NOTES	FIRST YEAR
WhatsApp Business	For the support button and member messages. Charged per conversation; estimate at moderate volume.	₹7,200
Transactional email	Sign-up confirmation, approvals, payment notices. Up to roughly 50,000 emails a year.	₹3,600
SMS and OTP	Charged per message. Estimate at roughly 30,000 messages a year.	₹9,000
Part C subtotal, first year		₹19,800

All three of these rise with usage

WhatsApp, email and SMS are charged per message — at ten times the members, expect roughly ten times those three lines. Server, database and storage hold steady until traffic grows enough to need a larger machine. Unlike the earlier proposal there is no one-time store fee here, so year two costs the same as year one at the same volume.

4 · Payment schedule and timeline

Payment in four stages

STAGE	DUE WHEN	SHARE	AMOUNT
1 · Advance	On signing, before work begins	25%	₹1,08,750
2 · Design & backend	On approval of the designs and the working calculation engine	25%	₹1,08,750
3 · Member website	On the member website going live	25%	₹1,08,750
4 · Panel & handover	On the administrator panel, verification desk and support desk being delivered	25%	₹1,08,750
Total, before GST			₹4,35,000

GST is added to each invoice at the prevailing rate.

Indicative timeline

PHASE	WORK	WEEKS
1	Requirements confirmed, design of every web screen	2
2	Backend, calculation engine, administrator interfaces	4
3	Member website	3
4	Administrator panel, verification desk, support desk	3
5	Testing, deployment and handover	2
Total, with phases 3 and 4 partly overlapping		10–12

Two to four weeks shorter than the version with apps

Dropping the applications removes the four-week build phase and, with it, store review — the one part of the earlier schedule that belonged to Google and Apple rather than to either of us. What is left is entirely within our control and yours.

What moves this date

Two things, and both sit on your side: how quickly designs and each stage are approved, and how quickly the content, business details and any licences are supplied.

5 · What is and is not included

Included in the quoted price

- All source code, handed over and owned by you outright
- Two rounds of revisions at each design stage
- Deployment to your server
- Training for your staff on the administrator panel
- 60 days of free bug fixing after handover — anything that does not work as specified is corrected at no charge

Not included

- The infrastructure and service costs in parts B and C, which are billed by the providers
- Any mobile application, and the store accounts that would go with one
- Content: written copy, photography, and any legal text such as terms, a privacy policy or a risk disclosure
- Business registration, financial licences, or regulatory approvals
- Payment gateway integration — the platform settles in cash by design, verified by an administrator
- A licensed market data feed, should live instrument prices be wanted from a real provider

Optional — annual maintenance

COVER	WHAT IT INCLUDES	PER YEAR
Standard	Security patches and dependency updates, monitoring of the alerts, restoring from backup if needed, and up to 8 hours a month of small changes.	₹72,000

Quoted separately and entirely optional. Without it the platform keeps running; what lapses is somebody watching it and keeping it current.

Terms

- Prices are in Indian Rupees and hold for 30 days from the date on the cover.
- GST is charged at the prevailing rate on all development invoices.
- Infrastructure and service costs are estimates at current provider rates; they are billed by those providers directly to you, and move with their pricing and your usage.
- Work on each stage begins once the previous stage is approved in writing.
- Anything outside the scope set out in section 2 is quoted separately before it is started.
