

COMMERCIAL PROPOSAL

NorthGold Project Quotation

Investment platform with member website, administrator panel, mobile applications, and the infrastructure to run all of it.

ONE-TIME DEVELOPMENT

₹5,90,000

Website, admin panel and both apps · incl. GST

SERVER & SERVICES · FIRST YEAR

₹1,47,500

Hosting, database, messaging, store fees · incl. GST

Total to build and run for the first year — **₹7,37,500**. Development is billed in four stages; server and service costs are billed by their providers. Full breakdown inside.

30 days from the date above

1 • Summary

This proposal covers a complete investment platform: a public website and member portal, a staff administration panel, Android and iOS applications, and the servers and services that keep them running.

ONE-TIME DEVELOPMENT ₹5,00,000 Design, web platform, mobile apps, testing and launch. Before GST.	FIRST-YEAR RUNNING COST ₹1,25,000 Servers, database, monitoring, backups, messaging and store fees. Before GST.
--	--

What the total is made of

PART	WHAT IT COVERS	AMOUNT
A • Web platform	Design system, backend and business logic, member website, administrator panel, testing	₹3,10,000
B • Mobile applications	App design, Android and iOS build from one codebase, push notifications, store submission	₹1,90,000
One-time development, before GST		₹5,00,000
GST	At 18% on services	₹90,000
One-time development, payable		₹5,90,000
RECURRING	WHAT IT COVERS	FIRST YEAR
C • Infrastructure	Application server, database, cache, storage, backups, monitoring, domain	₹94,800
D • Services & stores	WhatsApp, email, SMS, Play Console, Apple Developer Program	₹30,200
Running cost, before GST		₹1,25,000
GST	At 18%	₹22,500
First-year running cost, payable		₹1,47,500

Maintenance is quoted separately and is optional

An annual support contract is set out in section 6. It is not included in either figure above, so the totals here are what it costs to build and to keep the lights on — nothing more.

2 · Part A — Web platform

Everything a member and your staff use from a browser, and the system underneath that does the calculating.

ITEM	INCLUDED	AMOUNT
Design	Complete visual identity, colour and type system, light and dark themes, and every screen designed for desktop and mobile before a line is built.	₹45,000
Backend & business logic	Accounts and authentication, the investment plan engine, the monthly payout schedule, the wallet and its permanent transaction record, deposit and withdrawal approval, the five-level referral calculation, and the administrator interfaces behind every screen.	₹1,10,000
Member website	Public landing page with plan comparison and returns calculator, about and contact pages, sign-up and sign-in, member dashboard, wallet, investments, referral network with a visual tree, and profile with document upload.	₹85,000
Administrator panel	Deposit and withdrawal approval queues, platform-wide dashboard, plan and rate editor, referral level configuration, member directory with network view, identity verification queue, and settings.	₹50,000
Testing & handover	Automated tests over the money calculations, cross-browser and mobile checking, deployment to your server, and a walkthrough with your team.	₹20,000
Part A subtotal		₹3,10,000

Why the backend is the largest single line

Most of the value is not what you can see. Slab-matched plans, schedules that cannot be altered after a member invests, payments that can never run twice, funds held the moment a withdrawal is requested, and commission that walks five levels up a referral chain — all of it has to be right the first time, because errors here are errors in somebody's money.

3 · Part B — Mobile applications

Android and iOS applications built from a single shared codebase, so a change is made once and appears on both.

ITEM	INCLUDED	AMOUNT
App design	Every screen designed for phone use rather than shrunk from the website, following the same identity so both feel like one product.	₹25,000
Android & iOS build	Sign-up and sign-in, dashboard, wallet with deposit and withdrawal requests, investments with full schedules, referral network and sharing, profile and document upload — connected to the same system as the website, so figures always agree.	₹1,30,000
Push notifications	Alerts when a deposit is approved, when a monthly payment arrives, when a referral earns, and when a withdrawal is ready to collect.	₹20,000
Store submission	Store listing, screenshots, privacy policy, data-safety declarations, and handling the review process for both stores until the apps are live.	₹15,000
Part B subtotal		₹1,90,000

App store review is the one date nobody controls

Google typically reviews in a few days; Apple can take longer and is stricter with financial applications. Both may ask for changes — business registration, a published privacy policy, or proof of the right to offer investment products. The submission fee above covers responding to those requests, but the approval date itself is theirs, not ours.

4 · Parts C and D — Running the platform

These are ongoing costs, billed by the providers rather than by us. They are listed at current market rates so you can see the real cost of running the platform.

C · Servers and infrastructure

ITEM	SPECIFICATION	MONTHLY	YEARLY
Application server	4 vCPU, 8 GB RAM, 160 GB SSD, with room to grow. Runs the website, the panel and the app's backend.	₹2,700	₹32,400
Database	Managed PostgreSQL with automatic failover and a standby replica.	₹2,200	₹26,400
Cache & job queue	Redis. Runs the monthly payout schedule and live price updates.	₹750	₹9,000
File storage & delivery	Receipts, identity documents and images, served from a content network.	₹850	₹10,200
Backups	Daily database snapshots kept for 90 days, plus weekly off-site copies.	₹650	₹7,800
Monitoring & alerts	Uptime checks, error tracking and alerts to your team when something breaks — before a member reports it.	₹600	₹7,200
Domain & certificate	One .com domain with WHOIS privacy. Security certificate renewed automatically.	₹150	₹1,800
Part C subtotal, per year			₹94,800

D · Services and store fees

ITEM	NOTES	FIRST YEAR
WhatsApp Business	For the support button and member messages. Charged per conversation; estimate at moderate volume.	₹7,200
Transactional email	Sign-up confirmation, approvals, payment notices. Up to roughly 50,000 emails a year.	₹3,600
SMS and OTP	Charged per message. Estimate at roughly 30,000 messages a year.	₹9,000
Google Play Console	One-time registration, never charged again.	₹2,100
Apple Developer Program	Charged every year. Required to keep the iOS app published.	₹8,300
Part D subtotal, first year		₹30,200

Three of these rise with usage, and one falls

WhatsApp, email and SMS are charged per message — at ten times the members, expect roughly ten times those three lines. Server, database and storage hold steady until traffic grows enough to need a larger machine. The Play Console fee is one-time, so year two is about ₹2,100 cheaper.

5 · Payment schedule and timeline

Payment in four stages

STAGE	DUE WHEN	SHARE	AMOUNT
1 · Advance	On signing, before work begins	25%	₹1,25,000
2 · Design & backend	On approval of the designs and the working calculation engine	25%	₹1,25,000
3 · Web delivery	On the member website and administrator panel going live	25%	₹1,25,000
4 · App delivery	On both applications being published to the stores	25%	₹1,25,000
Total, before GST			₹5,00,000

GST is added to each invoice at the prevailing rate.

Indicative timeline

PHASE	WORK	WEEKS
1	Requirements confirmed, design of every web screen	2
2	Backend, calculation engine, administrator interfaces	4
3	Member website and administrator panel	4
4	App design and build for both platforms	4
5	Testing, deployment, store submission and handover	2
Total, with phases 3 and 4 partly overlapping		12–14

What moves this date

Two things, and both sit on your side: how quickly designs and each stage are approved, and how quickly the content, business details and any licences are supplied. Store review, as noted earlier, is the third — and it belongs to Google and Apple.

6 · What is and is not included

Included in the quoted price

- All source code, handed over and owned by you outright
- Two rounds of revisions at each design stage
- Deployment to your server and publication to both app stores
- Training for your staff on the administrator panel
- **60 days of free bug fixing** after handover — anything that does not work as specified is corrected at no charge

Not included

- The infrastructure and service costs in parts C and D, which are billed by the providers
- Content: written copy, photography, and any legal text such as terms or a privacy policy
- Business registration, financial licences, or regulatory approvals
- Payment gateway integration — the platform settles in cash by design. Quoted separately if you add online payments later.
- New features requested after the scope in this document is agreed

Optional — annual maintenance

PLAN	COVERS	MONTHLY	YEARLY
Support & maintenance	Security updates, server monitoring, backup verification, bug fixes, store compliance updates when Google or Apple change their rules, and up to 5 hours of small changes each month.	₹10,000	₹1,20,000

Optional, and can start after the 60-day free period ends. Without it, later work is charged at an hourly rate.

Terms

- This quotation is valid for **30 days** from its date.
- Prices are in Indian Rupees. GST is charged additionally at the prevailing rate.
- Work begins once the advance is received and the scope is signed.
- Source code and ownership transfer on receipt of the final payment.
- Third-party services are billed directly to you by their providers; those figures are estimates at today's rates.
- Anything outside the scope in this document is quoted before work on it starts, never invoiced as a surprise.

Client signature and date
